Date: 06/08/2012 09:06 AM

---

I expect to be at work in Potomac Yards South on July 11 and should be available for a meeting and/or conference call on that date. Once we have the agenda, we can invite others. It is reasonable to expect that someone who can address product chemistry and someone who can address acute toxicity requirements also will be available, as well as at least some of the others in the Insecticide-Rodenticide Branch who will be invited to the meeting.

---

Dan and Bill, Bill, nice talking with you yesterday. For some reason I cannot find the e-mail I sent to you. That is why I called. Not sure what the computer problem is but I am having it looked into. If you receive this e-mail please send me a response that you got it.

We are finalizing the cholecalciferol rodenticide registration plan. It contains all the guide line studies ( product chemistry, acute toxes, efficacy trials and the MRID numbers) we plan to cite for the registration of the technical and end use product. We would like to review the plan one more time before all the work begins. As we discussed we would like to do it on Wednesday July 11 at 8:30 AM EDT. Roger Sharples from Sorex in England who you worked with on the difenacoum registration will be joining the call since most of the product chemistry trials will be run by Sorex as it was done with the difenacoum. I put meeting or conference call since I maybe in DC on that date meeting with EPA on another issue. I will know that in about a week and let you know. The registration plan will be sent to you by June 28 so you will have plenty of time to review it before the meeting or conference call.

Thanks again for your understanding of my computer problem. Please confirm the date and time is acceptable for you guys and some of the product chemistry folks that you mentioned Bill. Awaiting your response.
